

Aisling Finucane, ECC General Manager

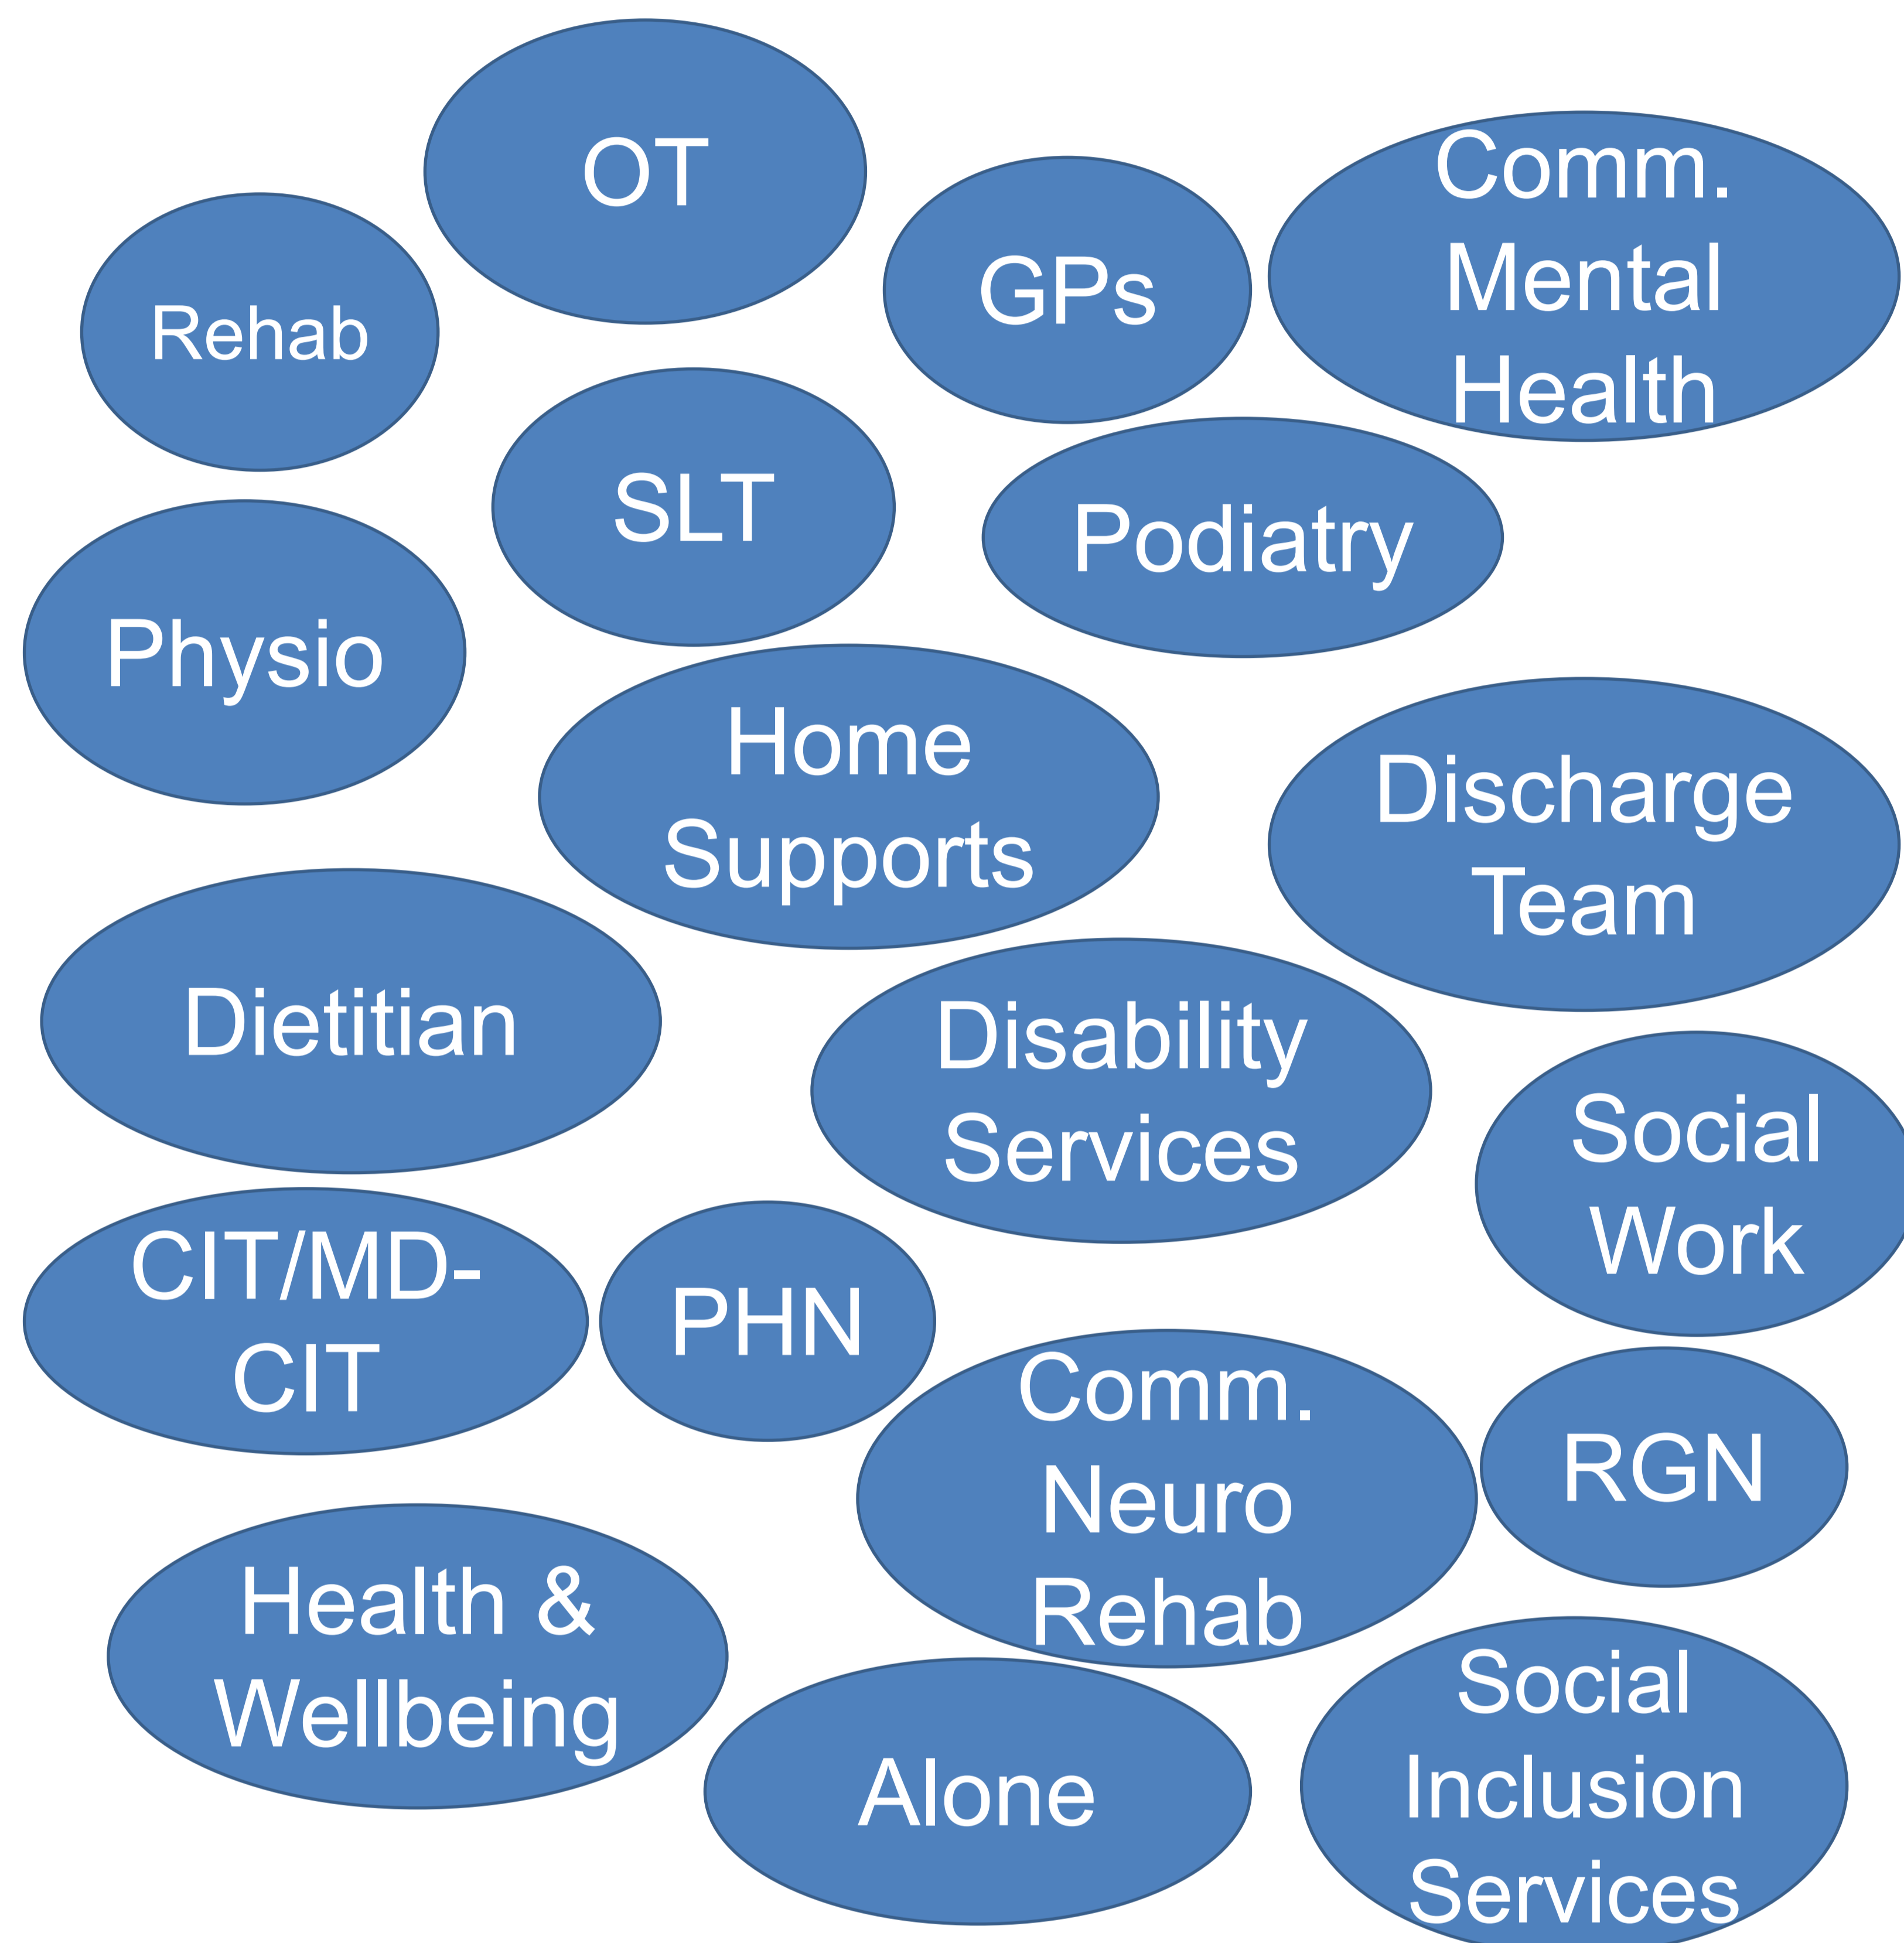

## A Community Healthcare Network – More than the Sum of its Parts

### How do we Measure We Prevent

There are many parts to the **Community Healthcare Network** that work **synergistically**, resulting in services that keep people well at home and help to get them home when they have needed **hospital care**.

These services are **delivered day in and day out** across the CHN, and it is difficult to measure the impact on hospital avoidance.

The **CHNs** will be instrumental in developing a mechanism for measurement of impact of ECC on **Urgent & Emergency Care**

**UHL ED** attendance data reflects: 26,739 YTD this is a **5%** reduction (1,309 cases) on 2022.

**UHL ED** Attendances 75+ Years Old reflects: 3,888 YTD this is a **3%** reduction (102 cases) on 2022

### Can this be attributed to ECC?

**CHNs** across the **MWCH** have had over 300 complex case discussions in 2023, all of whom have an MDT care plan in place with **170** people on an **At Risk of Unscheduled Care Register** monitored by the Primary Care Team.
